ASTRA-SIM Description

Saeed Rashidi
Ph.D. Student, School of Electrical & Computer Engineering
Georgia Institute of Technology

saeed.rashidi@gatech.edu

Acknowledgments: Srinivas Sridharan (Meta), Sudarshan Srinivasan (Intel)

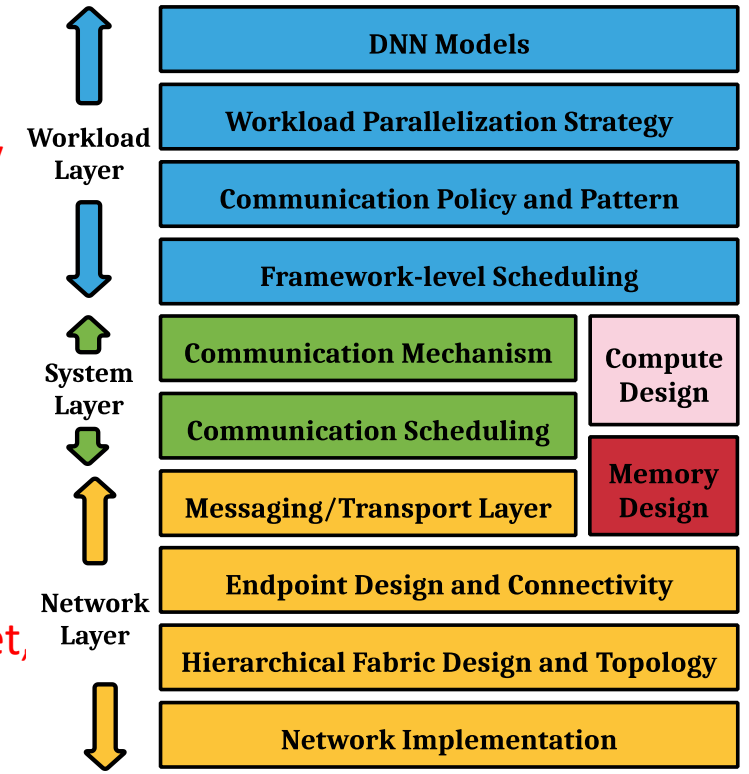
Overview

How to Model and Evaluate the Communication Effect

- It is a complex problem and can be viewed as three layers :
  - 1. Workload layer (the training loop):
    - Parallelism approach
    - Compute power
    - Communication size & type and dependency order
  - 2. System layer:
    - Collective communication algorithm
    - Chunk size, schedule of collectives
  - 3. Network layer:
    - Physical topology
    - Congestion control, communication protocol
    - Link BW, latency, buffers, routing algorithm

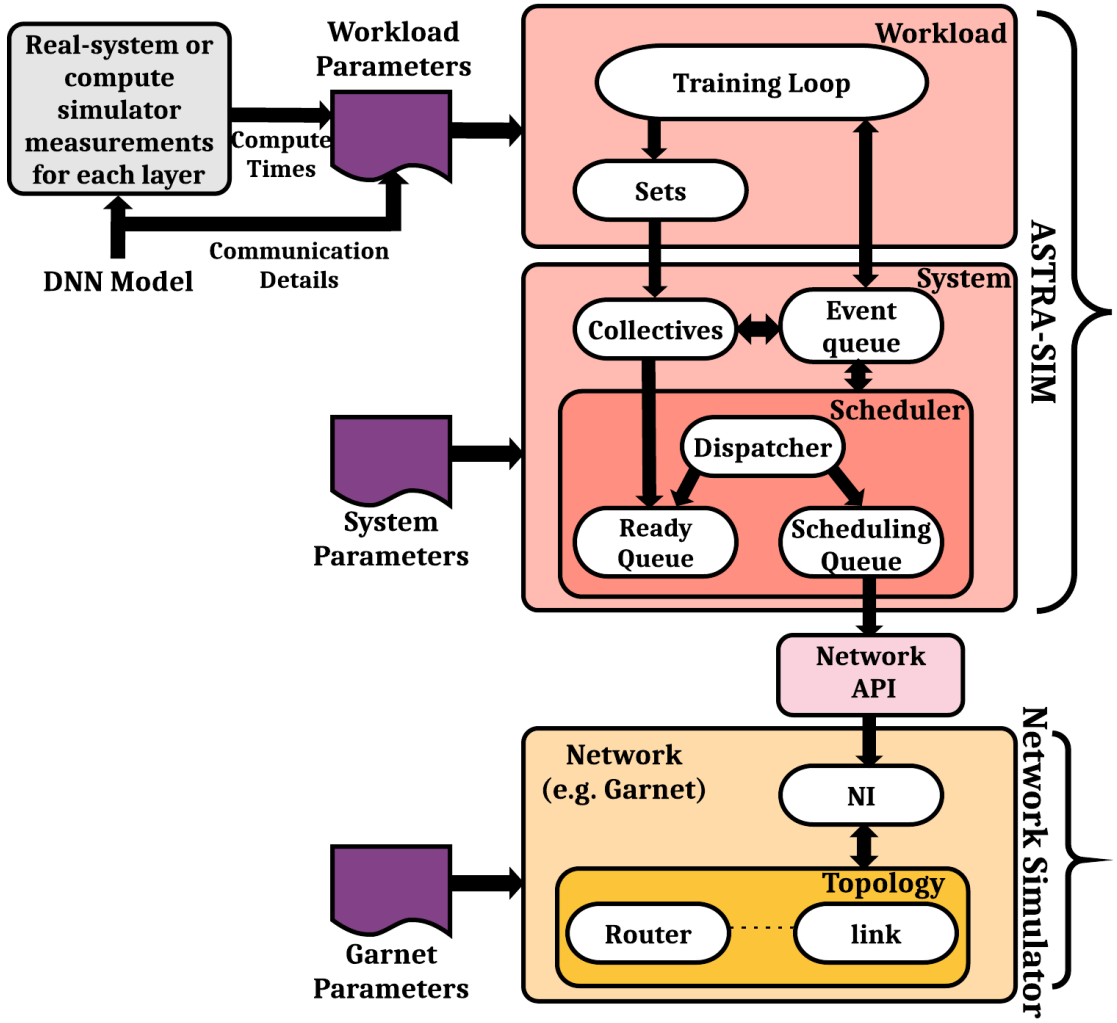
Not too many tools cover these aspects

Many tools In this area (e.g., Garnet, Analytical)



ASTRA-SIM Architecture

- Workload layer:
  - Supports Data-Parallel, Model-Parallel, Hybrid-Para
  - Easy to add new arbitrary training loop
  - **Two** workload front-ends:
    - Text-based workload engine (vanilla)
    - Execution graph engine (New)
- System:
  - Ring based, Tree-based, Direct based, and multi-pl
  - Easy to add new collective communication
- Network:
  - Analytical:
    - Supports hierarchical topologies
    - Each level in hierarchy can be switch, ring, FC….
    - https://github.com/astra-sim/analytical/tree/develop
  - GARNET:
    - Supports switch-based and torus-based topologies
    - Supports credit-based flow control
    - https://github.com/georgia-tech-synergy-lab/gem5_astra/t
  - NS3 (New):
    - Supports datacenter network networks (e.g., RoCE)
    - https://github.com/DartingMelody/ns3-interface



ASTRA-SIM Runtime Structure

- Each NPU is represented through separate instance of Workload, System, and Network API.
- Network API class is implemented by the network backend.

rashidi1saeed Merge pull request #44 from srinivas212/master ...	f7e54a8 15 hours ago	**335** commits
.github/workflows	Added GitHub Actions (#30)	8 months ago
astra-sim	CSV Writer Updated	19 hours ago
build	gem5 is now compatible with new changes	18 hours ago
docs/images	updated	9 months ago
examples	run_multi example script bug fixed	18 hours ago
extern	Merge pull request #43 from astra-sim/saeed_astra_dev	15 hours ago
inputs	Update README.md	17 hours ago
scripts/workload_generator	-:TESTED:-	last month
test	Fix formatting using clang-format	9 months ago
.clang-format	Use PyTorch .clang-format	9 months ago
.clang-tidy	Added GitHub Actions (#30)	8 months ago
.gitignore	Added GitHub Actions (#30)	8 months ago
.gitmodules	Add scale sim v2 submodule	last month
CMakeLists.txt	CMAKELists updated	yesterday
CODEOWNERS	Modify CODEOWNERS	16 hours ago
LICENSE	Update LICENSE	9 months ago
README.md	Update README.md	9 months ago

Network Input

Garnet network input

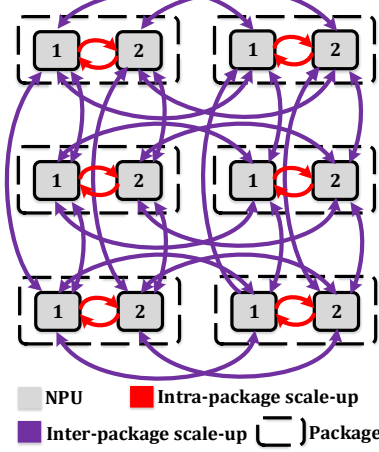
sample_torus.txt

```
num-npus: 12
num-packages: 6
package-rows: 3
topology: Torus3D
local-rings: 2
vertical-rings: 1
horizontal-rings: 1
flit-width: 2048
local-packet-size: 4096
package-packet-size: 4096
tile-link-width: 256
package-link-width: 256
vcs-per-vnet: 50
routing-algorithm: Ring_XY
router-latency: 1
local-link-latency: 90
package-link-latency: 200
buffers-per-vc: 5000
local-link-efficiency: 1.0
package-link-efficiency: 1.0
```

Analytical network input

sample_Torus3D.json

```
{
  "topology-name": "Hierarchical",
  "topologies-per-dim": ["Ring", "Ring", "Ring"],
  "dimension-type": ["N", "N", "N"],
  "dimensions-count": 3,
  "units-count": [2, 2, 3],
  "links-count": [2, 2, 2],
  "link-latency": [10, 100, 100],
  "link-bandwidth": [32, 16, 16],
  "nic-latency": [0, 0, 0],
  "router-latency": [0, 0, 0],
  "hbm-latency": [500, 500, 500],
  "hbm-bandwidth": [370, 370, 370],
  "hbm-scale": [0, 0, 0]
}
```



ASTRA-SIM Run Script

A Sample Run Script

run_DLRM_analytical.sh

```
#! /bin/bash -v

# Absolue path to this script
SCRIPT_DIR=$(dirname "$(realpath $0)")

# Absolute paths to useful directories
BINARY="${SCRIPT_DIR:?}"/../build/astra_analytical/build/AnalyticalAstra/bin/AnalyticalAstra
NETWORK="${SCRIPT_DIR:?}"/../inputs/network/analytical/sample_Torus3D.json
SYSTEM="${SCRIPT_DIR:?}"/../inputs/system/sample_torus_sys.txt
WORKLOAD="${SCRIPT_DIR:?}"/../inputs/workload/DLRM_HybridParallel.txt
STATS="${SCRIPT_DIR:?}"/results/run_DLRM_analytical

rm -rf "${STATS}"
mkdir "${STATS}"

"${BINARY}" \
--network-configuration="${NETWORK}" \
--system-configuration="${SYSTEM}" \
--workload-configuration="${WORKLOAD}" \
--path="${STATS}/" \
--run-name="sample_DLRM" \
--num-passes=2 \
--total-stat-rows=1 \
--stat-row=0

```

A Sample Run Script

run_DLRM_analytical.sh

```
#! /bin/bash -v

# Absolue path to this script
SCRIPT_DIR=$(dirname "$(realpath $0)")

# Absolute paths to useful directories
BINARY="${SCRIPT_DIR:?}"/../build/astra_analytical/build/AnalyticalAstra/bin/AnalyticalAstra
NETWORK="${SCRIPT_DIR:?}"/../inputs/network/analytical/sample_Torus3D.json
SYSTEM="${SCRIPT_DIR:?}"/../inputs/system/sample_torus_sys.txt
WORKLOAD="${SCRIPT_DIR:?}"/../inputs/workload/DLRM_HybridParallel.txt
STATS="${SCRIPT_DIR:?}"/results/run_DLRM_analytical

rm -rf "${STATS}"
mkdir "${STATS}"

"${BINARY}" \

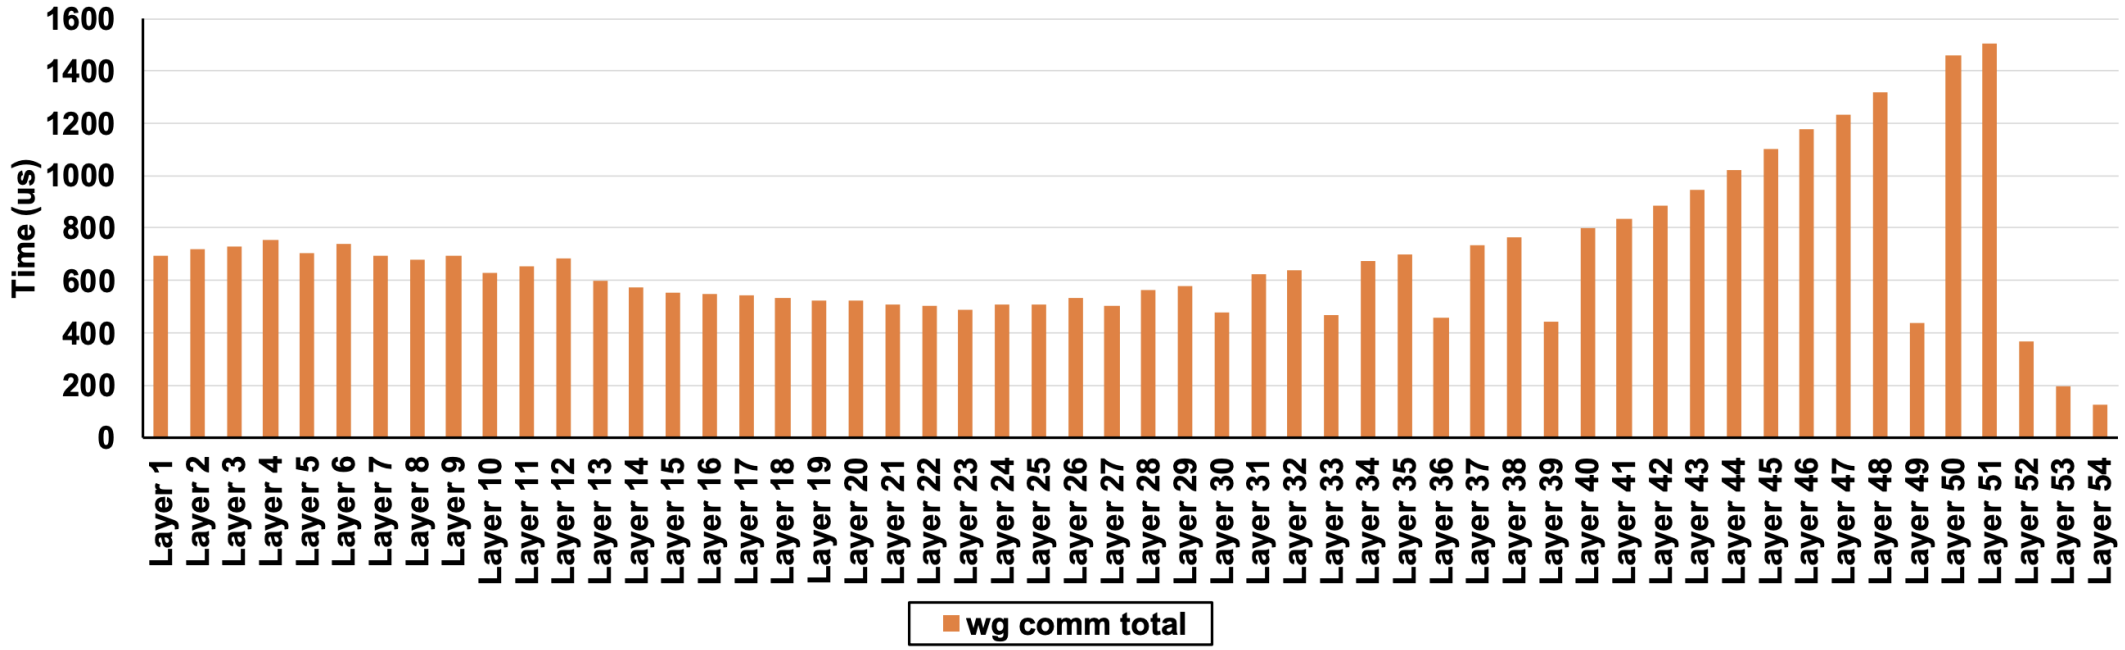
ResNet-50 Layer-Wise Raw Comm Latency

- A Torus 3D with total of 32 (2X4X4) nodes is used.
- Data parallel approach is used.
- Raw latency depends on the comm size plus the priority of each layer comm (queuing delay).

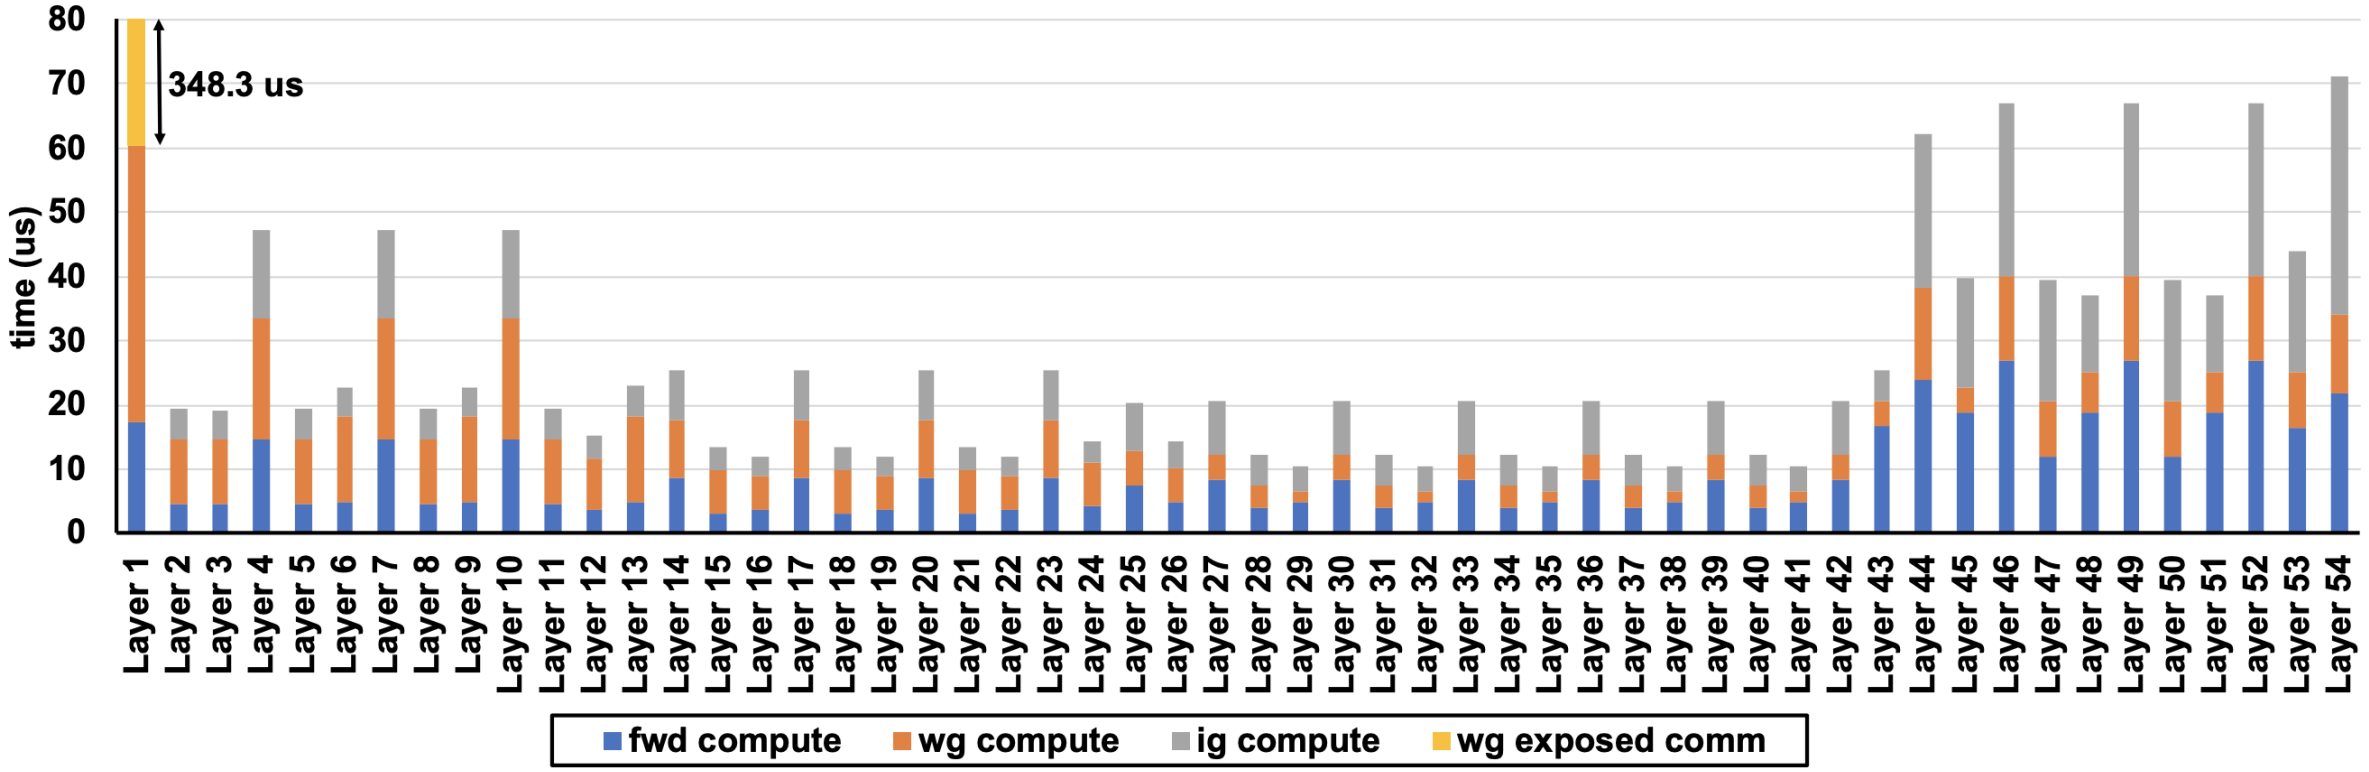


ResNet-50 Layer-Wise Compute vs. Exposed Comm Latency

- Exposed comm latency is observed for the first layer.

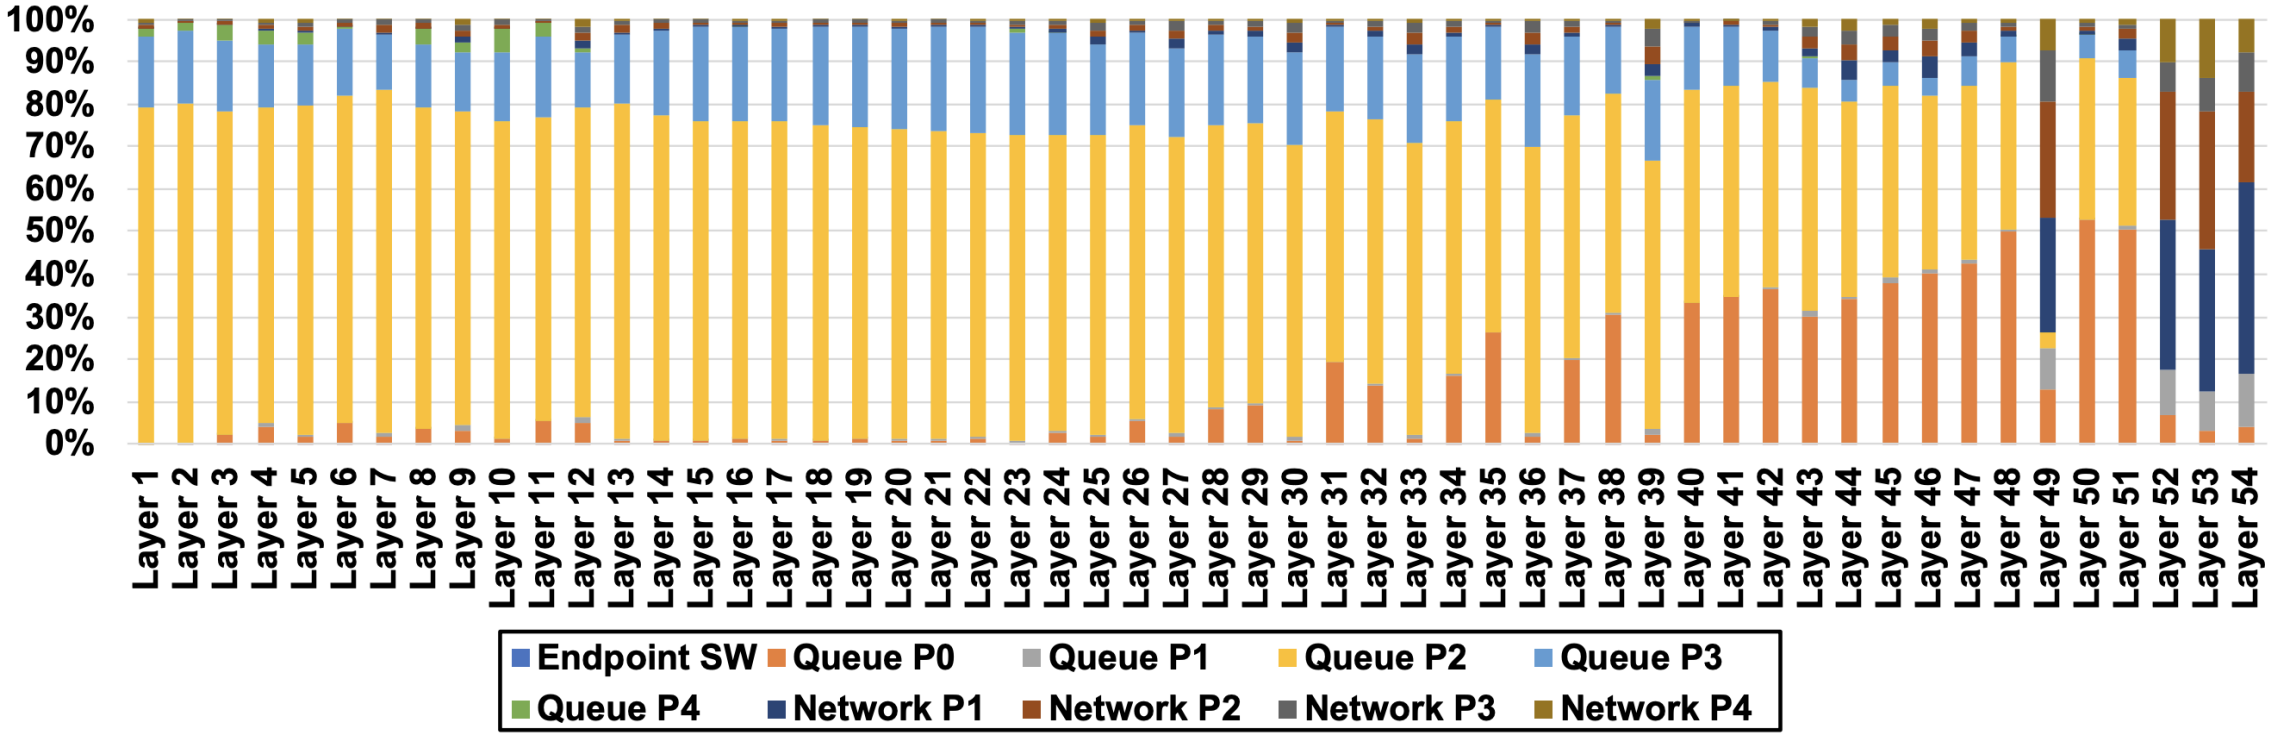
because by the time we reach other layers except that.

first layer, their comm is already finished.



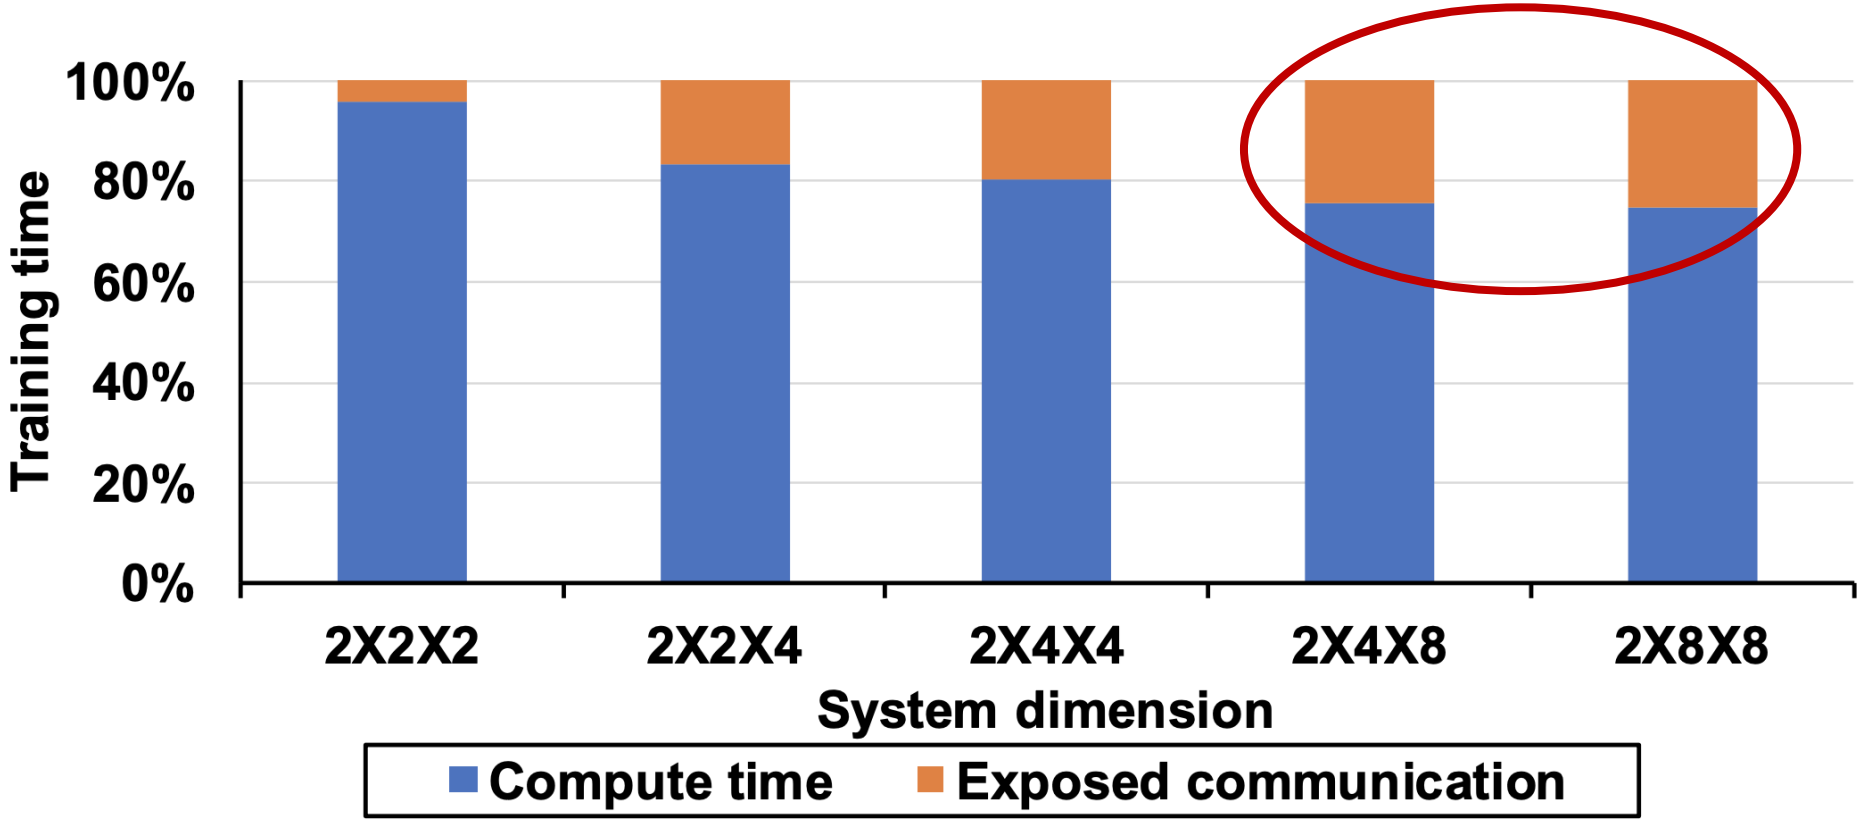
ResNet-50 Layer-Wise detailed latency

- Queue P2 is becoming the dominant factor due to very high speed of P1 (within package) that results most of the chunks get queued for the next phase (P2).



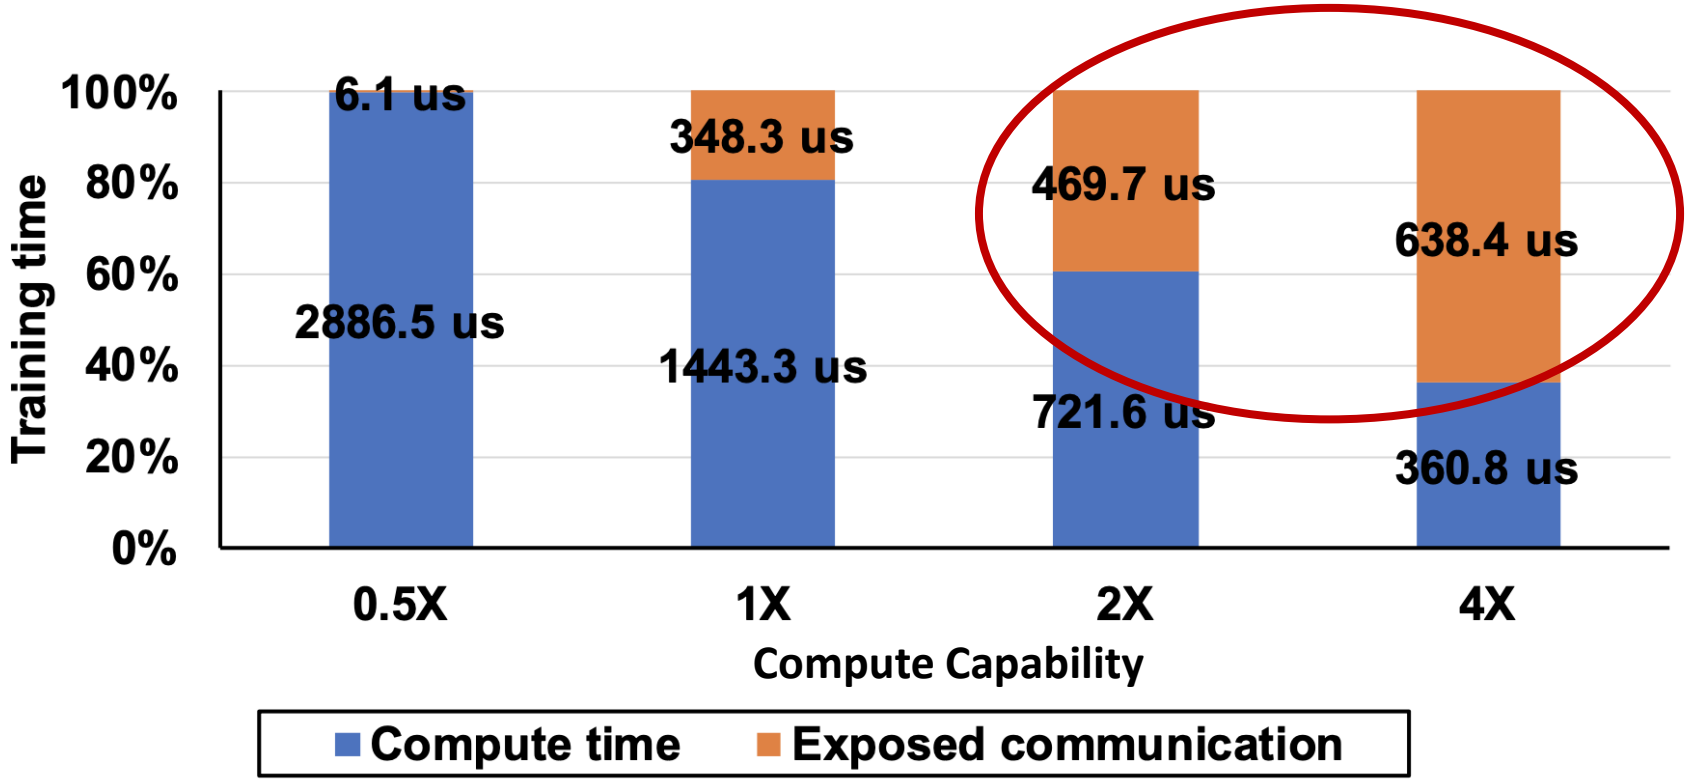
Effect of # of nodes on the Ratio of Total Compute vs Total Exposed Comm for ResNet-50

- A Torus 3D with total of 8, 16, 32, 64, 128 nodes are used.



Effect of Enhanced Compute Time per Node on the Ratio of Total Compute vs Total Exposed Comm for ResNet-50

- A Torus 3D with total of 32 nodes (2X4X4) is used.



Workload Generator

Workload Generator

- Generates workload inputs for the **text-based** workload engine
- Should receive the GEMM operations (M, N, K dimensions) and the parallelization strategy as input
- It uses SCALE-SIM simulator to find the compute times
- Please see astra-sim/scripts/workload_generator/README.md

Sample script to call workload generator

```
# For data-parallel
$ python3 gen_astrasim_workload_input.py \
  --datatype_size=2 \
  --mnk=mnk_inputs/example.csv \
  --num_npus=16 \
  --num_packages=2 \
  --output_file=../../inputs/workload/example_DATA.txt \
  --parallel=DATA \
  --run_name=example \
  --scalesim_config=../../extern/compute/SCALE-Sim/configs/google.cfg \
  --scalesim_path=../../extern/compute/SCALE-Sim
```

Sample MNK input file
